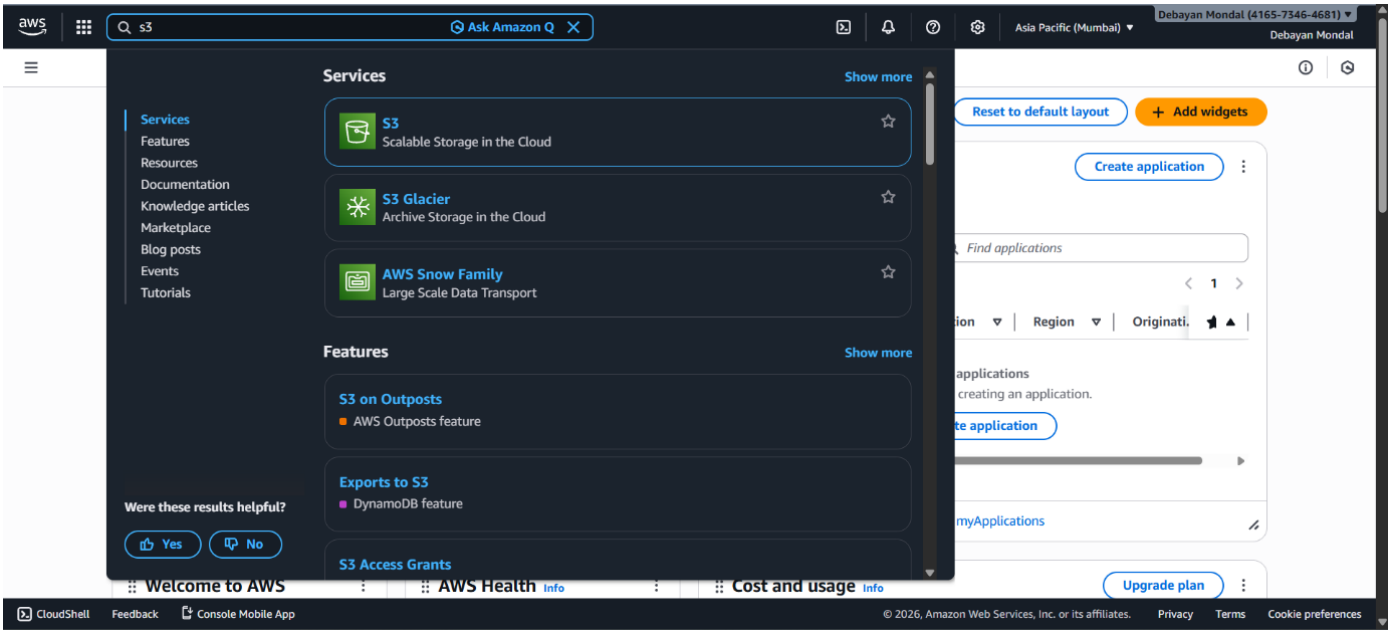
Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Assignment No.:5

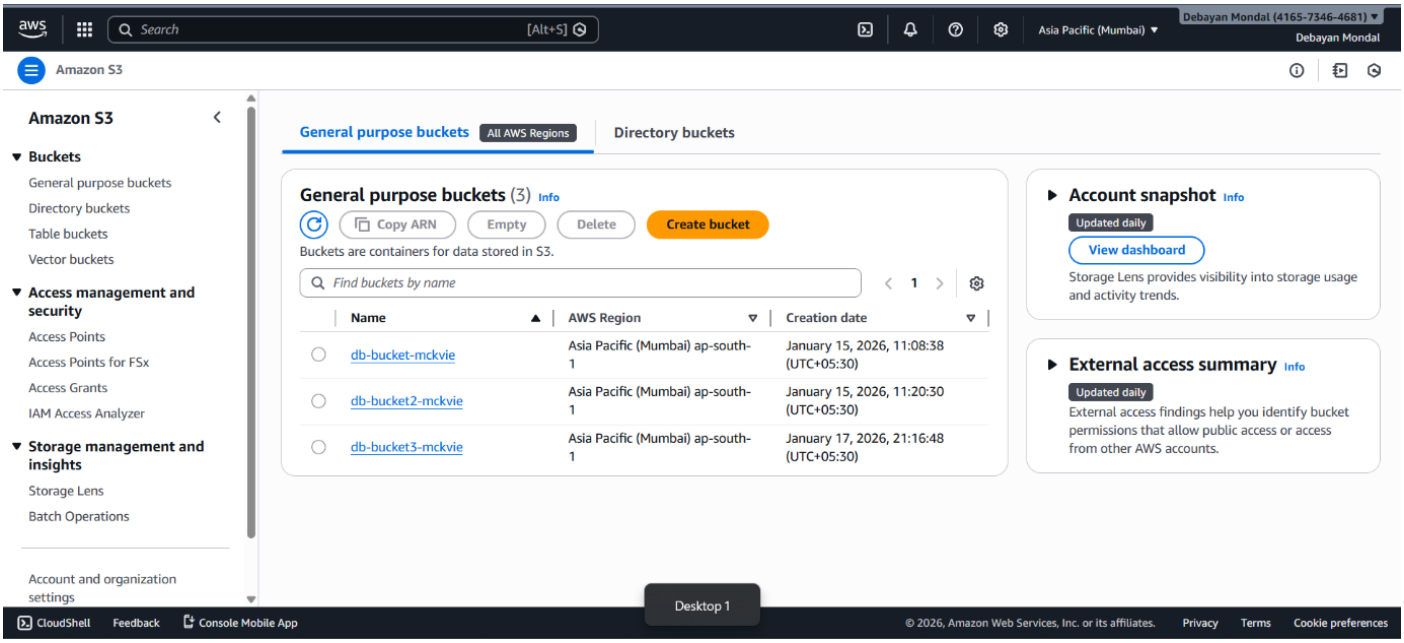
Problem Statement: Create a private bucket in AWS. Upload a file and check by presigned URL whether you can access the file or not.

Solution:

Step 1: Search **S3** on the search bar and click on it.

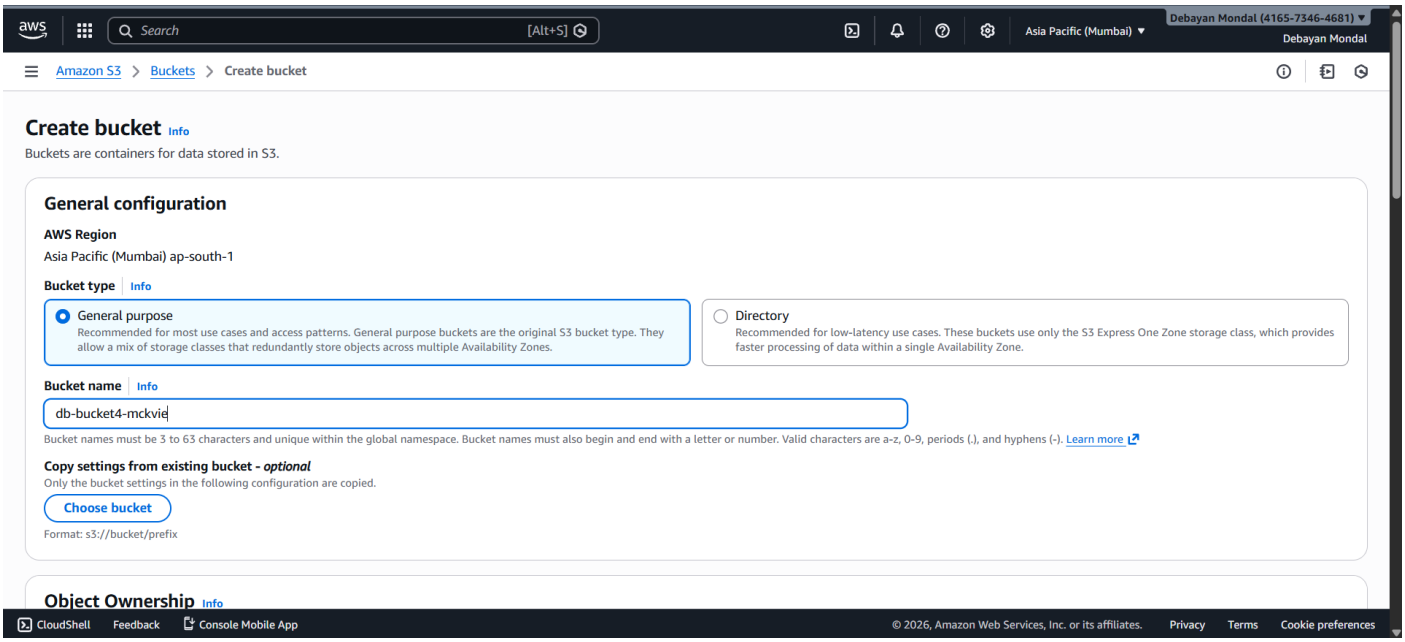


Step 2: Under the General Purpose buckets, click on **Create bucket**.

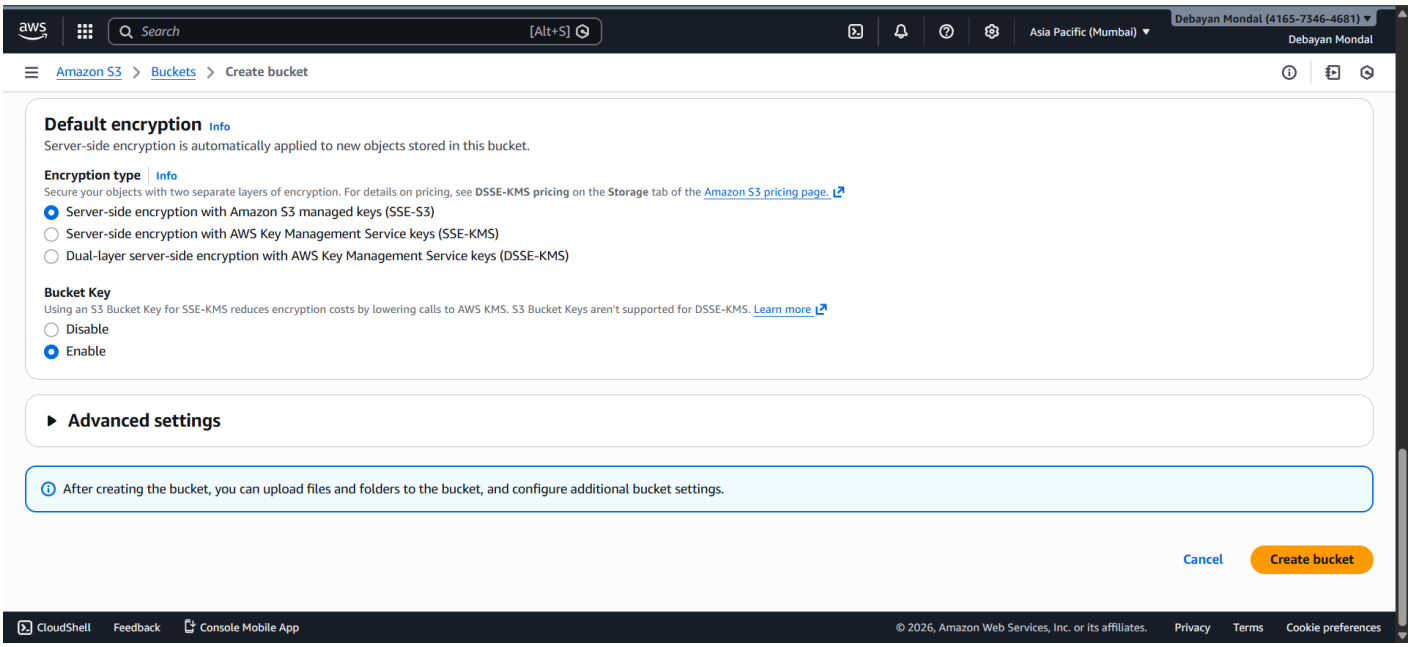


Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Step 3: Enter the name of the bucket and keep the other settings unchanged.

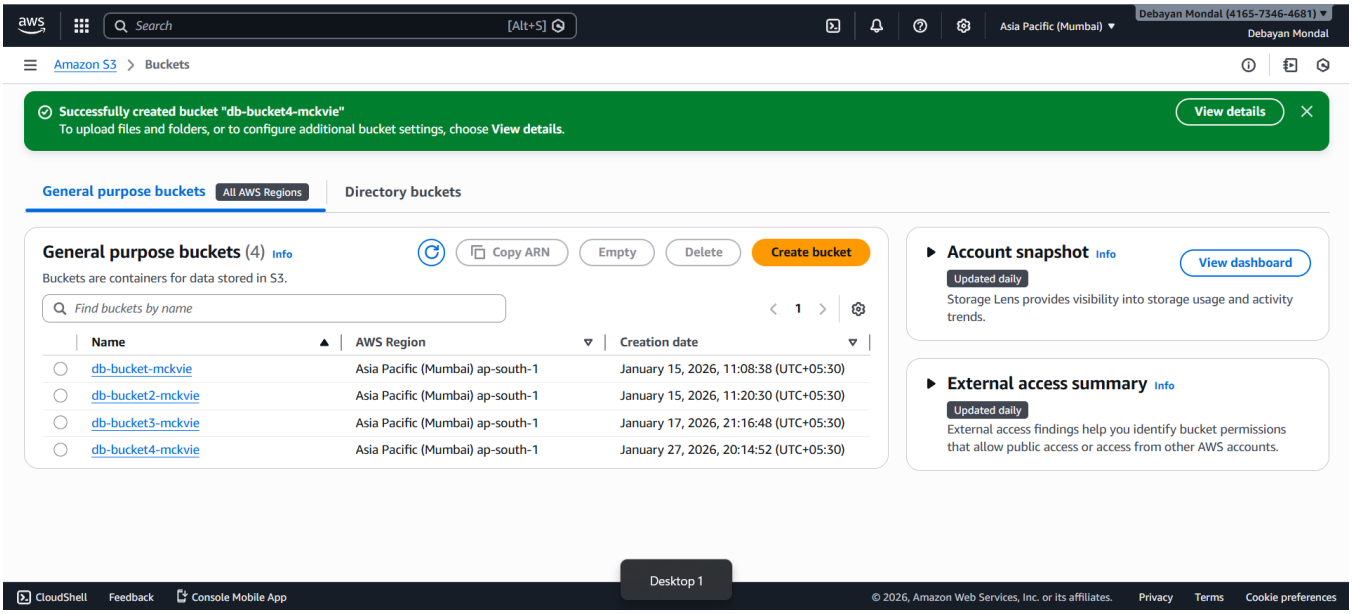


Step 4: At the end of the page click on **Create bucket** to create a new private bucket.

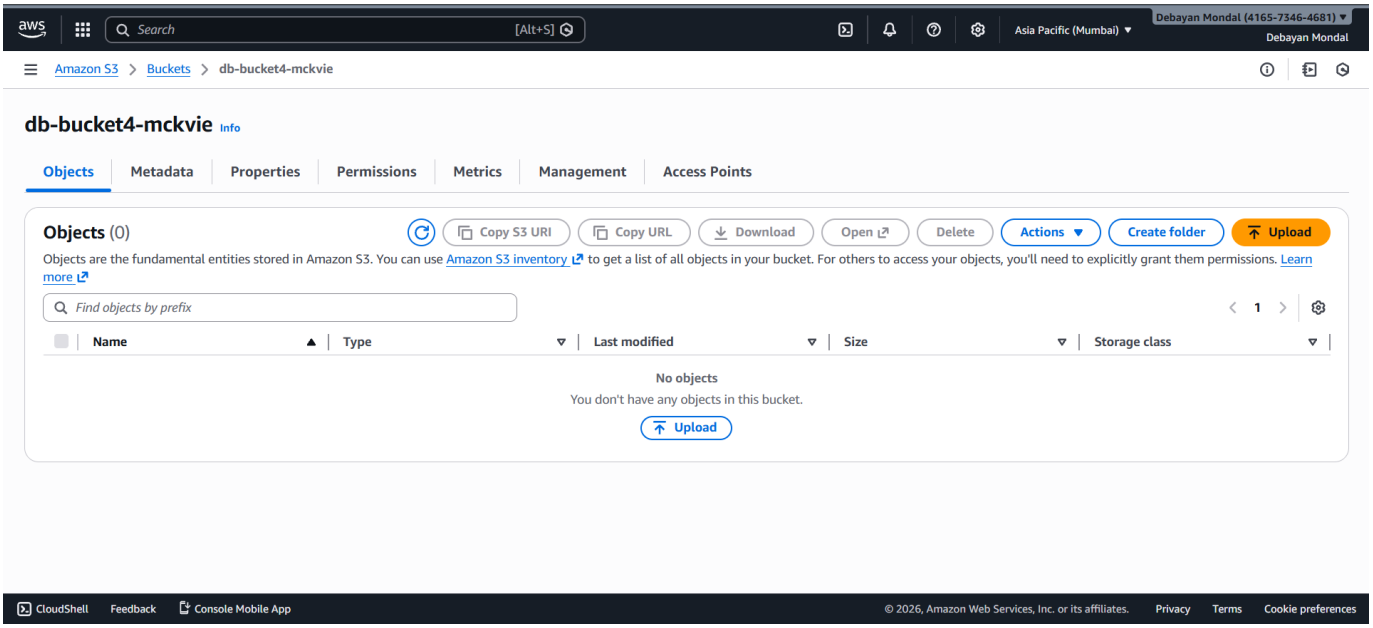


Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Step 5: A private bucket will be successfully created. Click on the newly made bucket **db-bucket4-mckvie.**

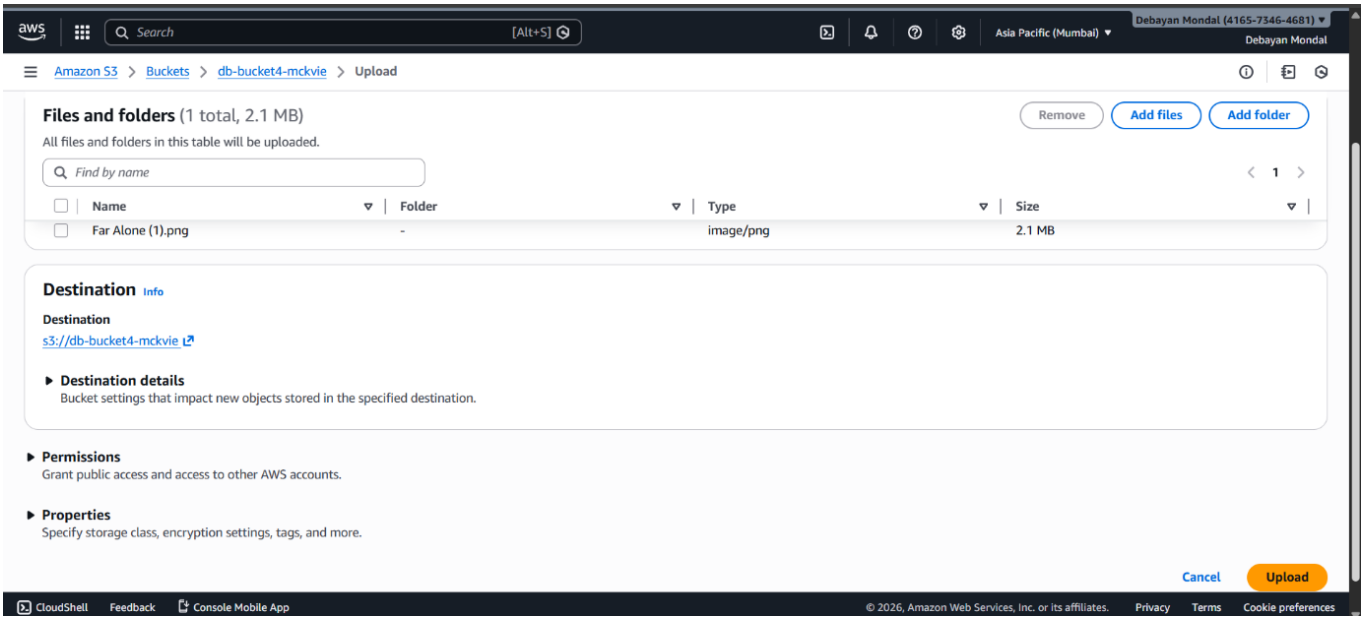


Step 6: Click on **Upload** button to upload file.

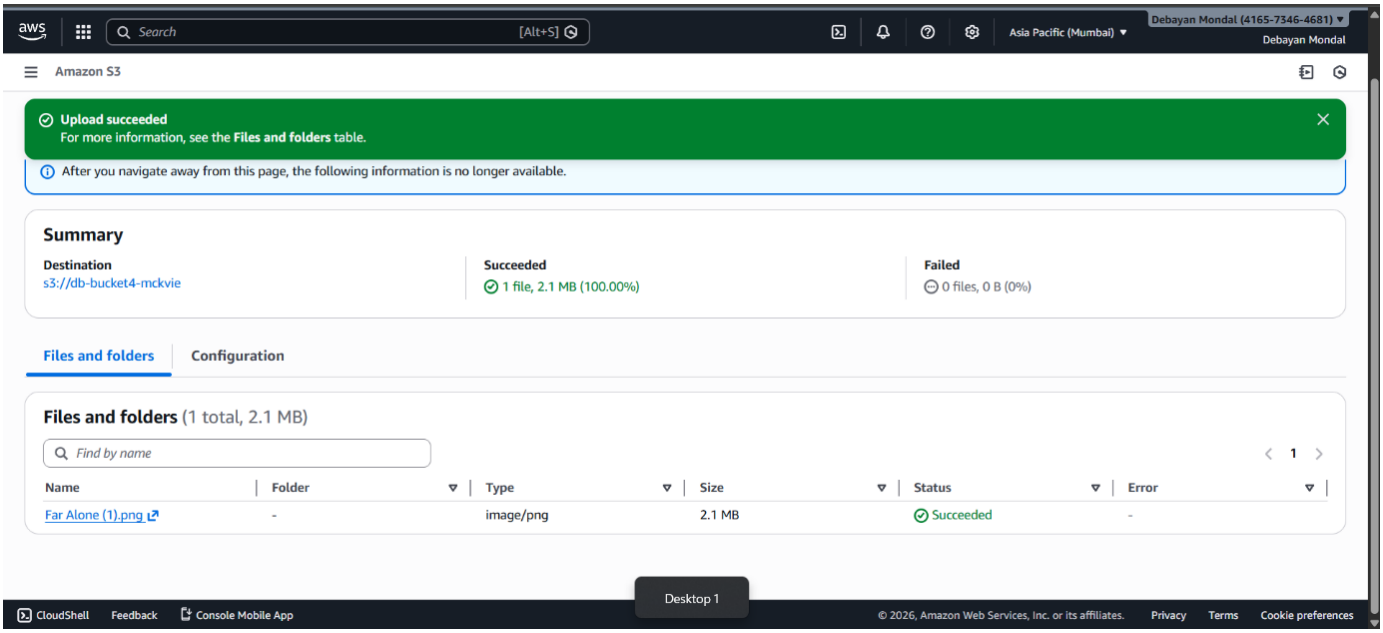


Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Step 7: In this page, File we want to upload in this case **Far Alone(1).png** and click on the **Upload** button.

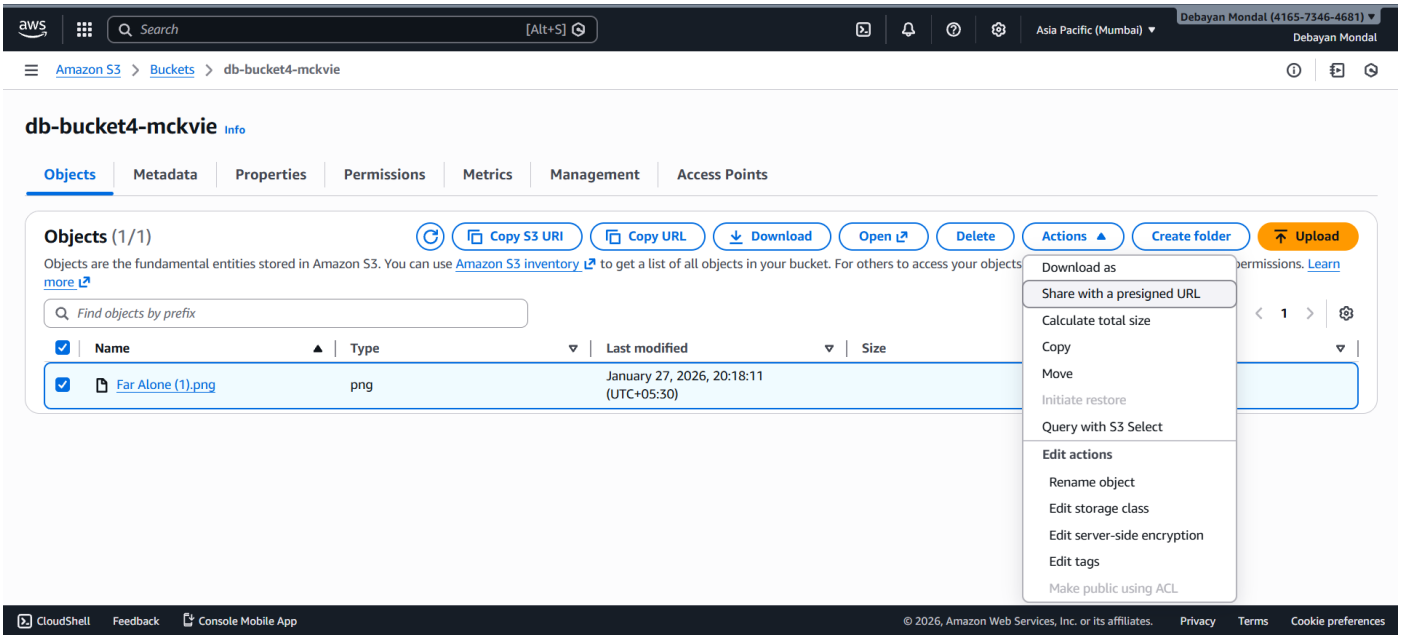


Step 8: The file will be successfully uploaded. Click on the **Close** button to return.

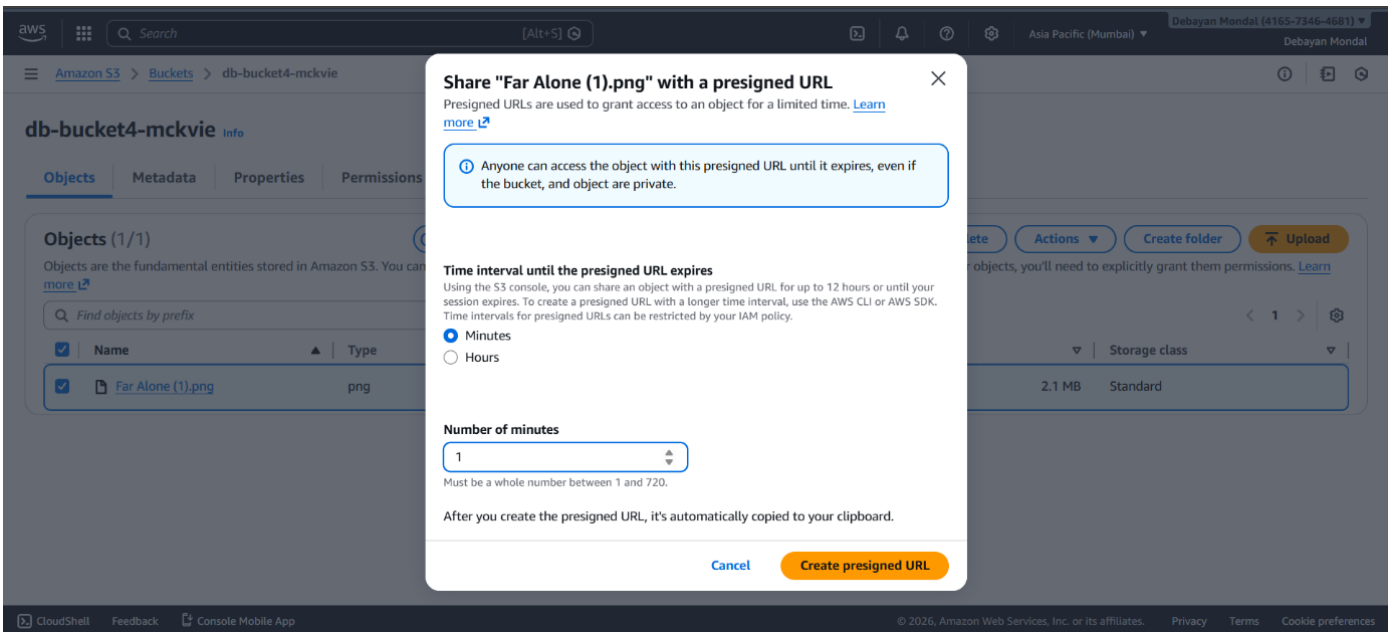


Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Step 9: Select the Uploaded file, Click on the **Action** button and then select **Share with a presigned URL** option.

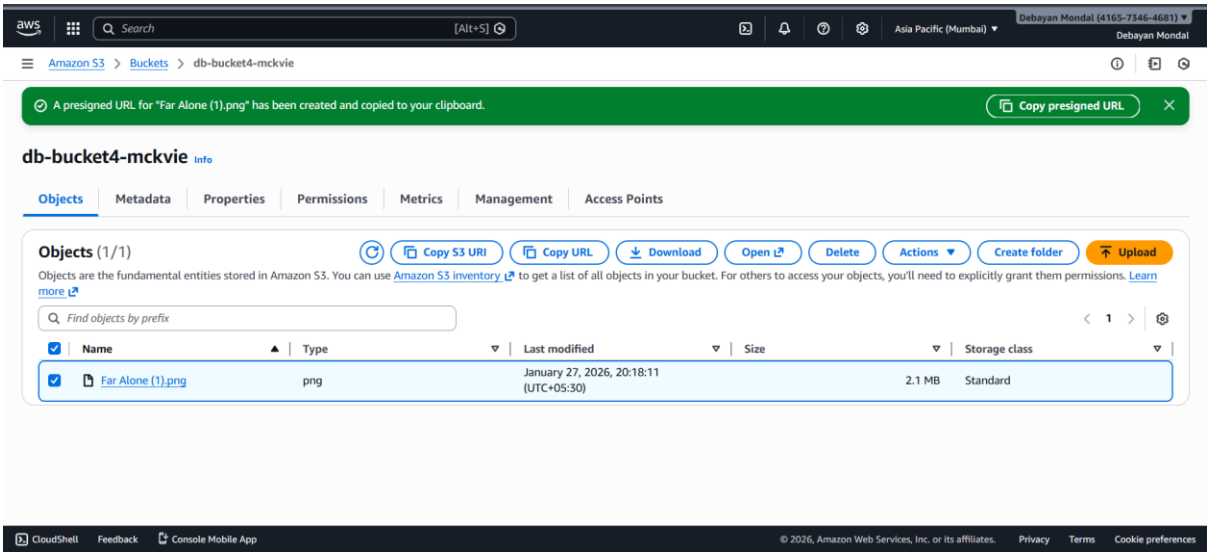


Step 10: In the Popup box, Enter the number of minutes and click on **Create presigned URL** button.

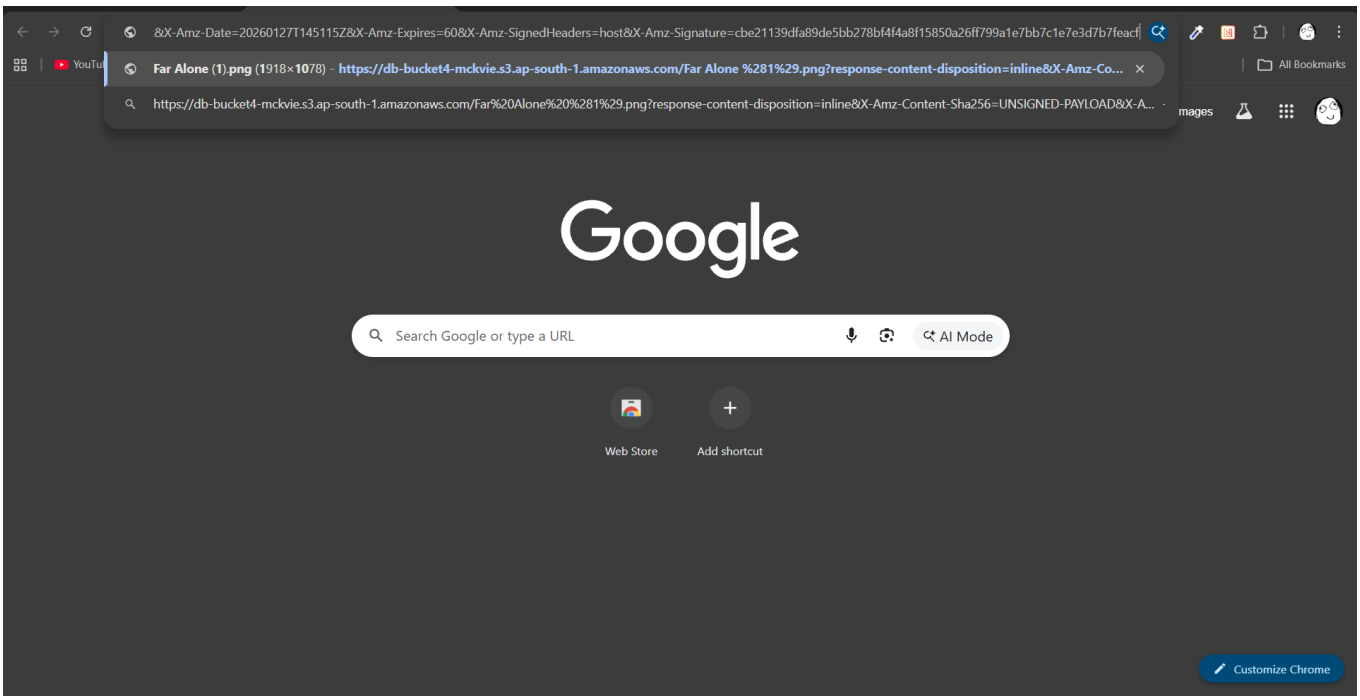


Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Step 11: The presigned Url will be created which can be used by clicking on the **Copy presigned URL** button and sharing it.

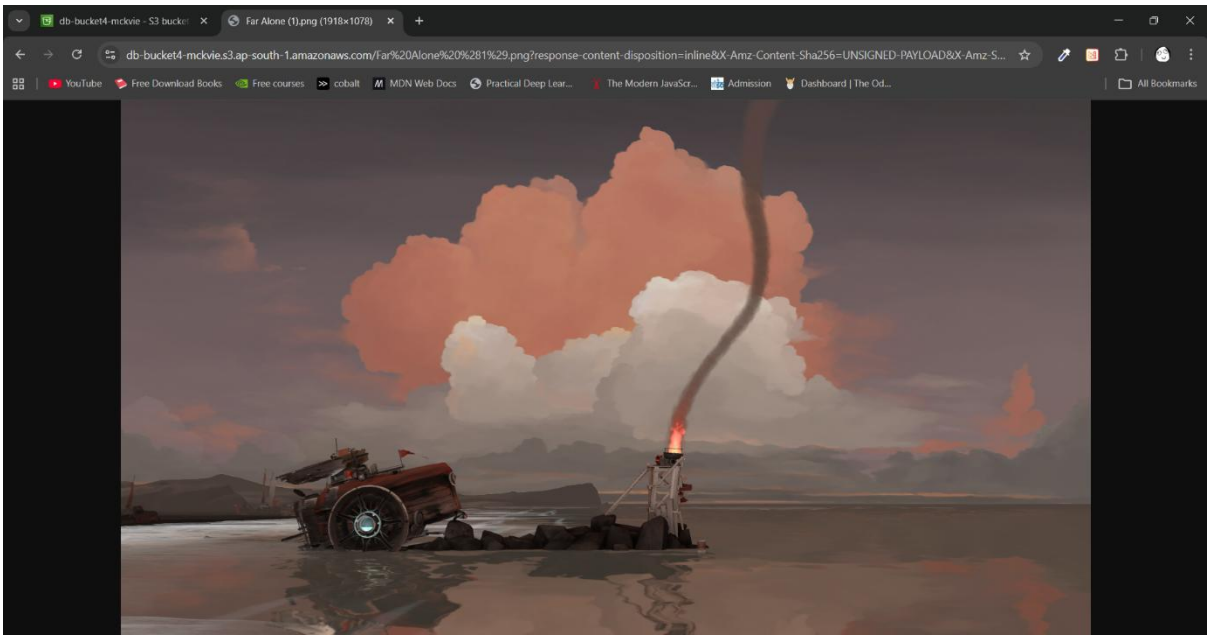


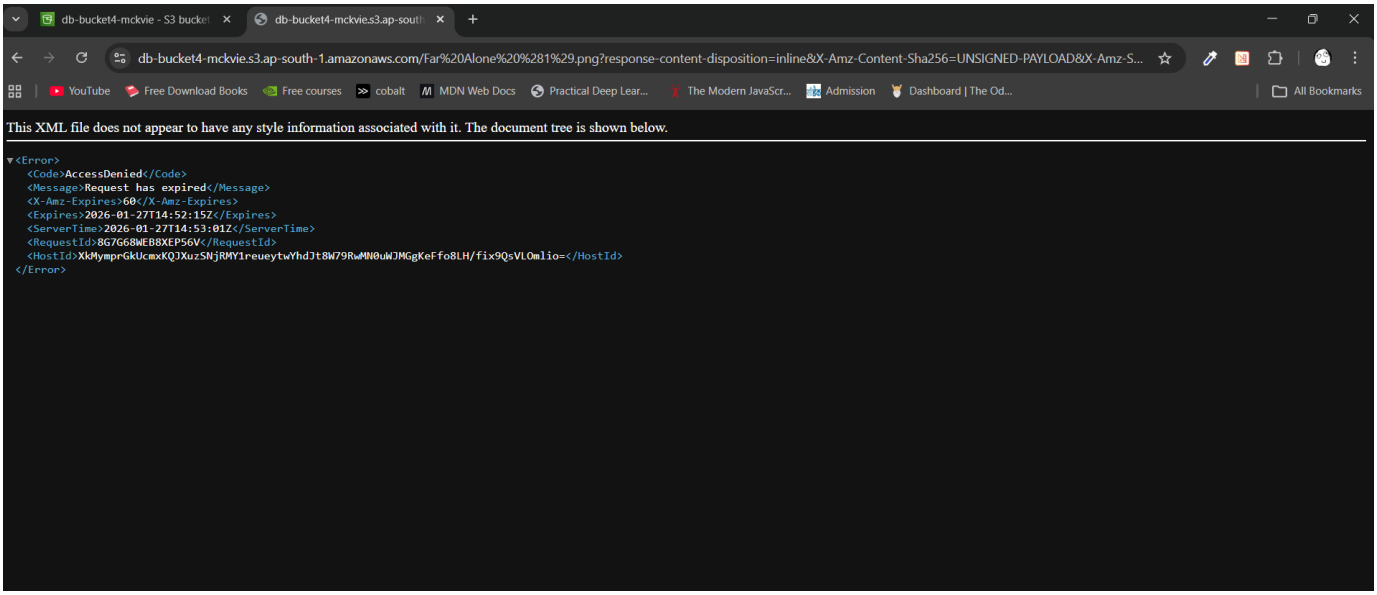
Step 12: We can now view the uploaded file by pasting the copied URL into a new tab.



Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Step 13: The File can be accessed only for 1minute.





Step 14: After which it will be blocked.
