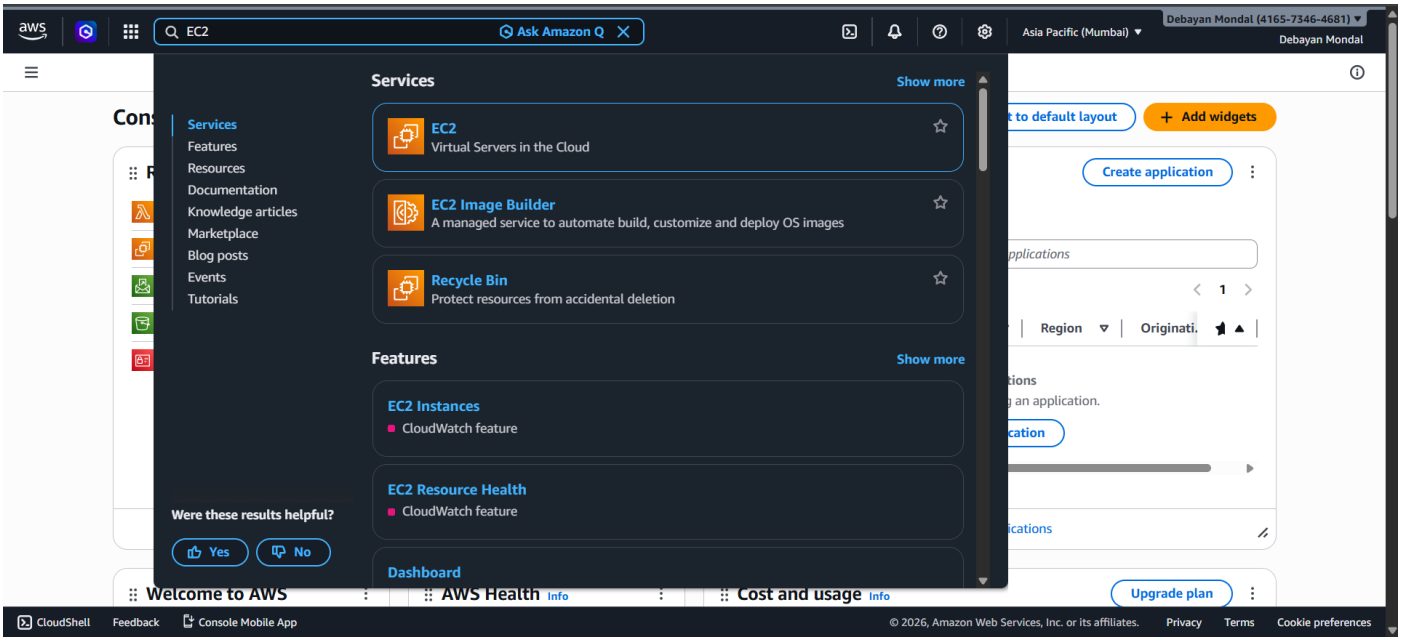
Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Assignment No.:14

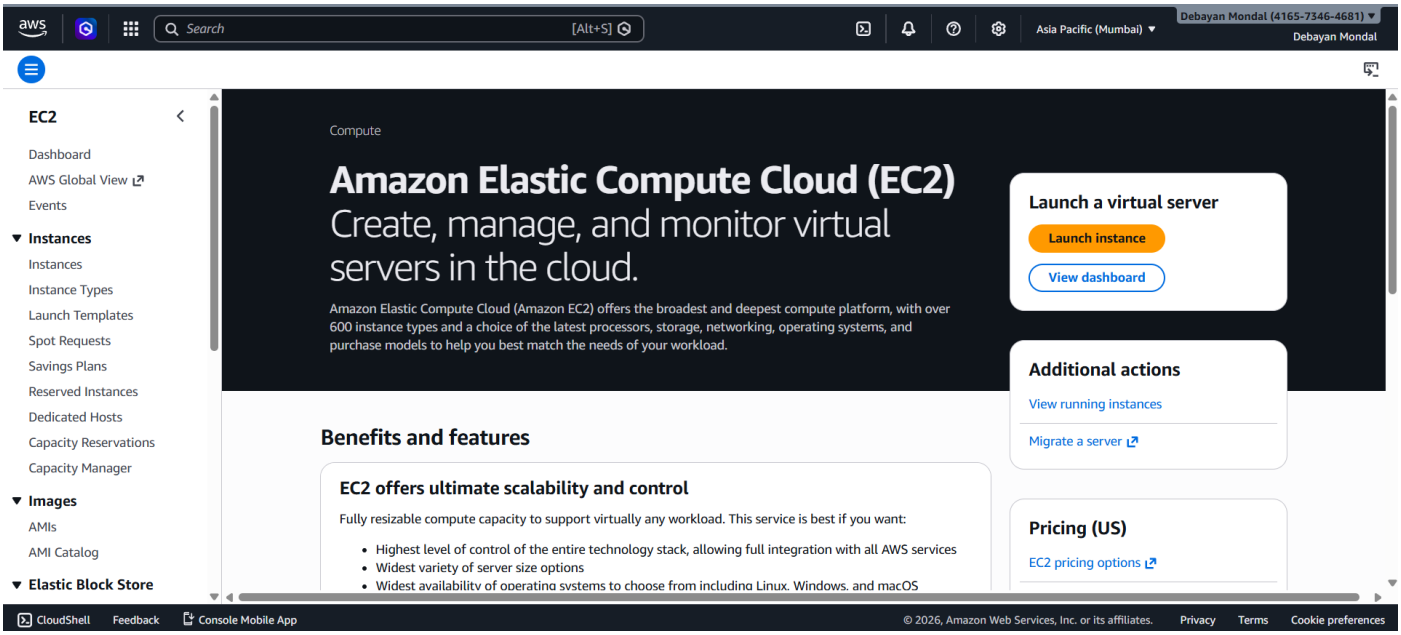
Problem Statement: Create an Elastic IP for an Instance.

Solution:

Step 1: Search EC2 on search bar and click on it.

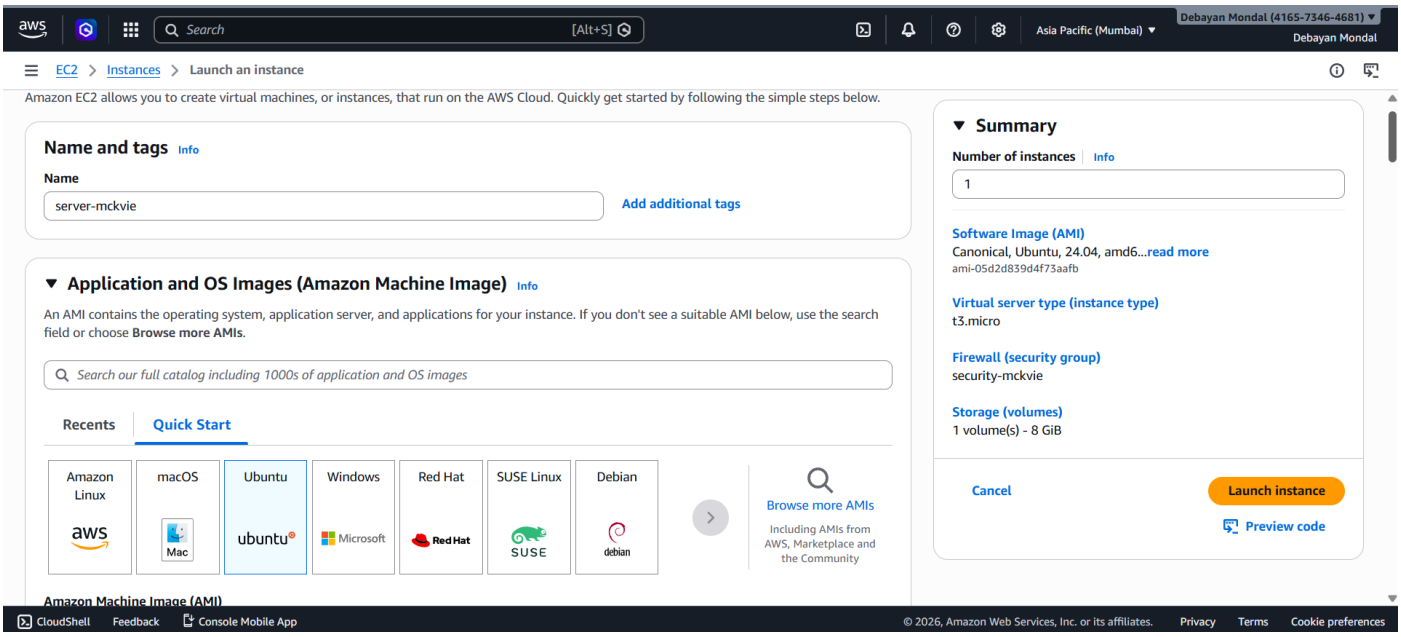


Step 2: Click on **Launch instance** button.

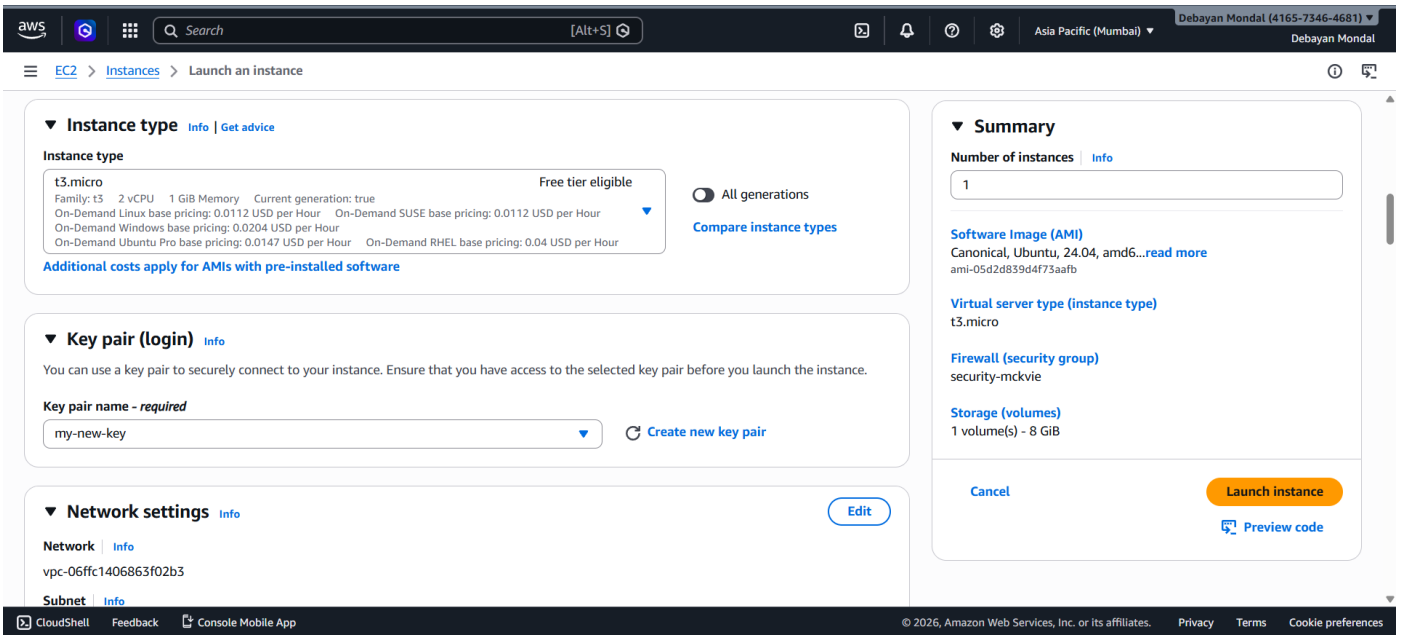


Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Step 3: Enter the server name, Select **ubuntu**.

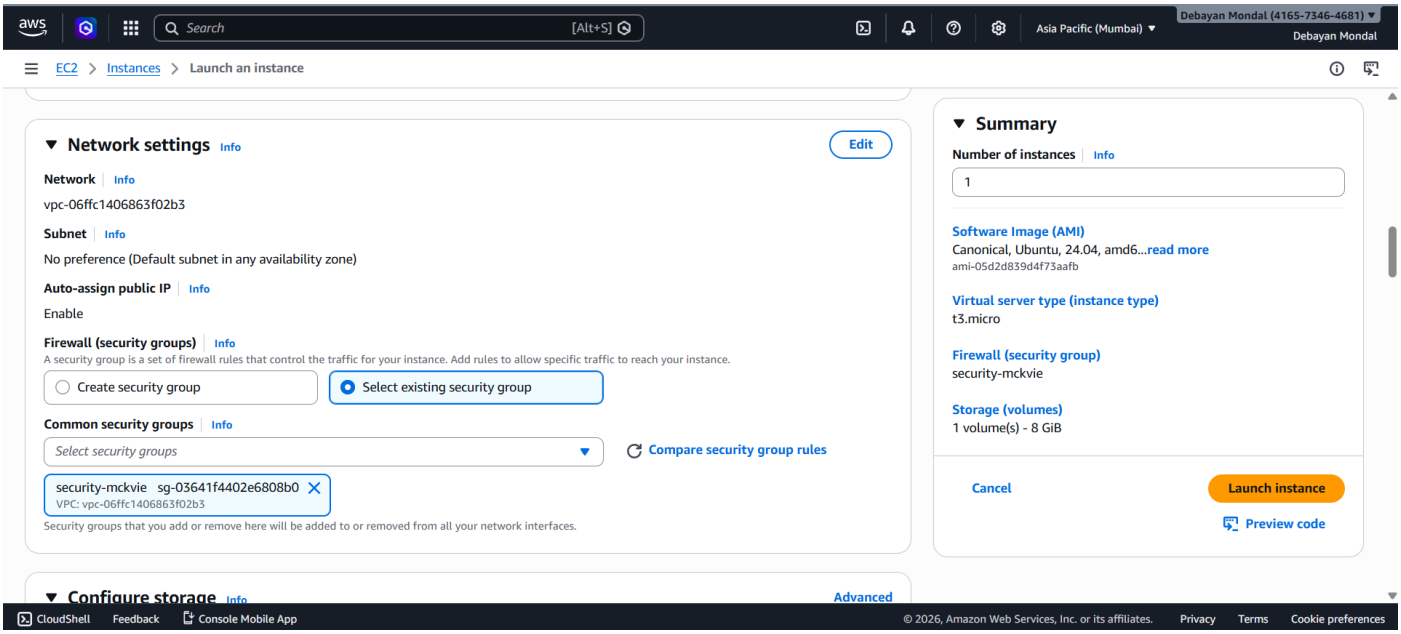


Step 4: Select a Key pair in this **my-new-key**.

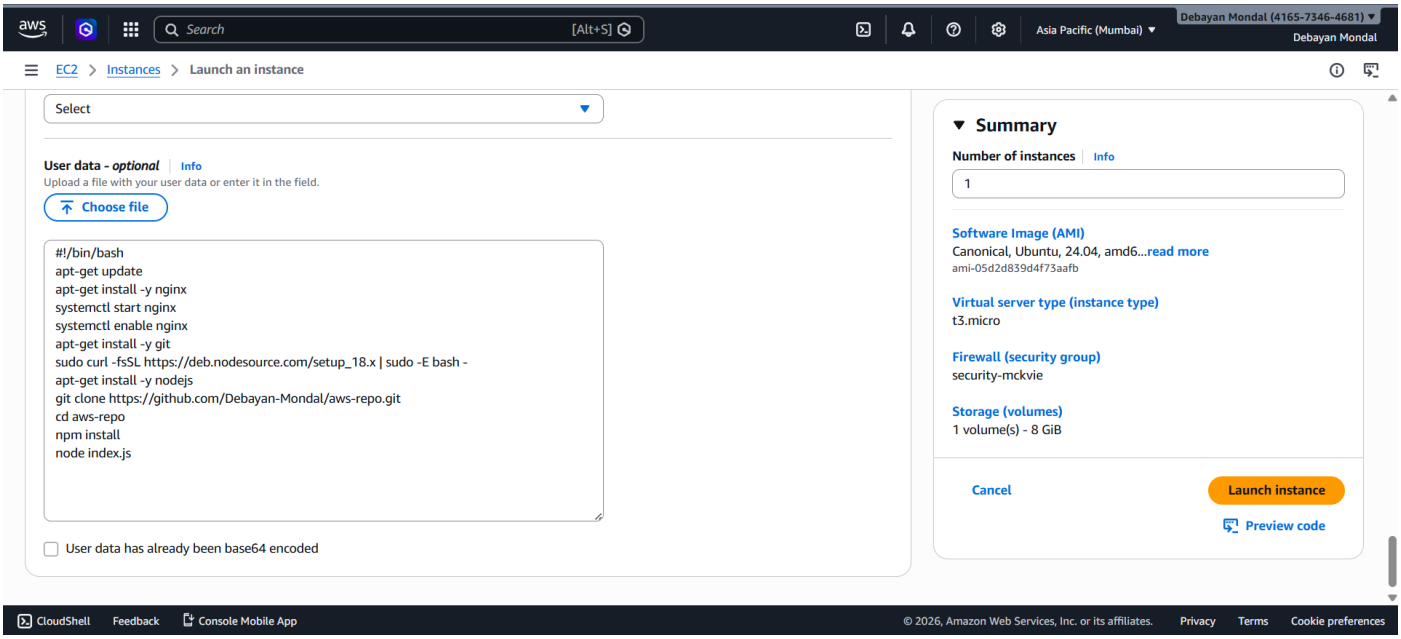


Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Step 5: Click on **Select existing security group** and choose a security group in this case **security-mckvie**.

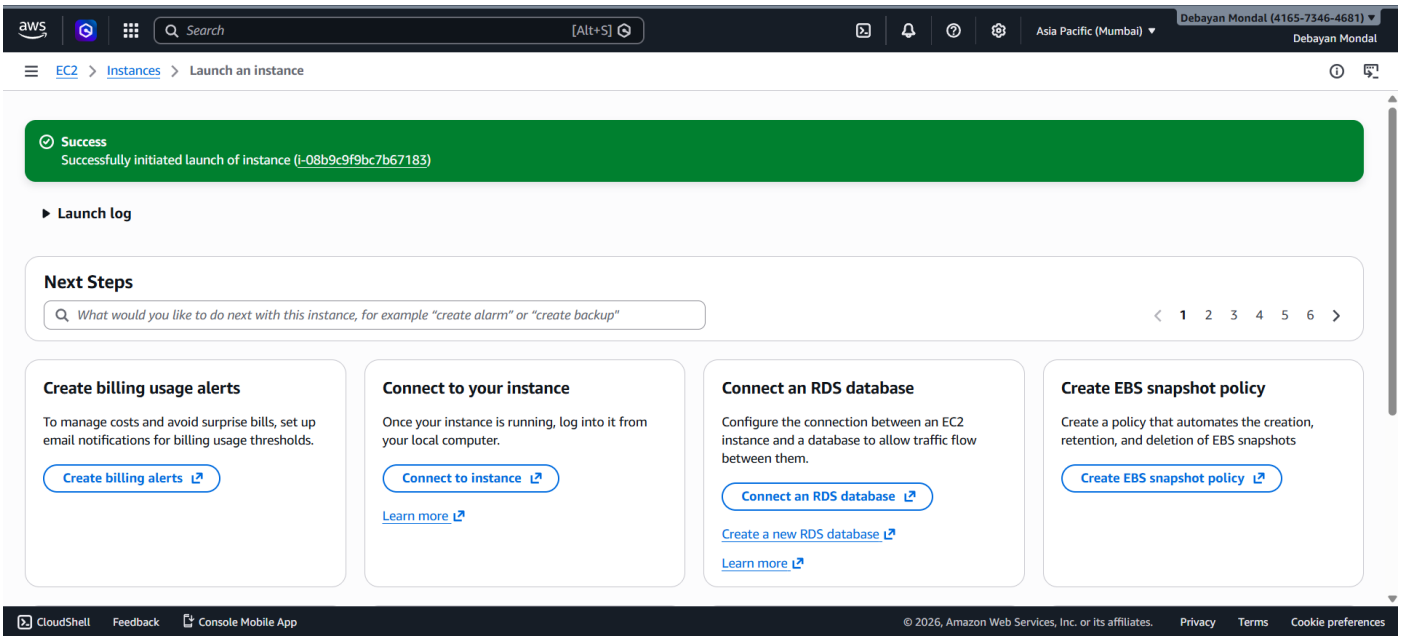


Step 6: Enter the following script in the User data and click on **Launch instance** button.



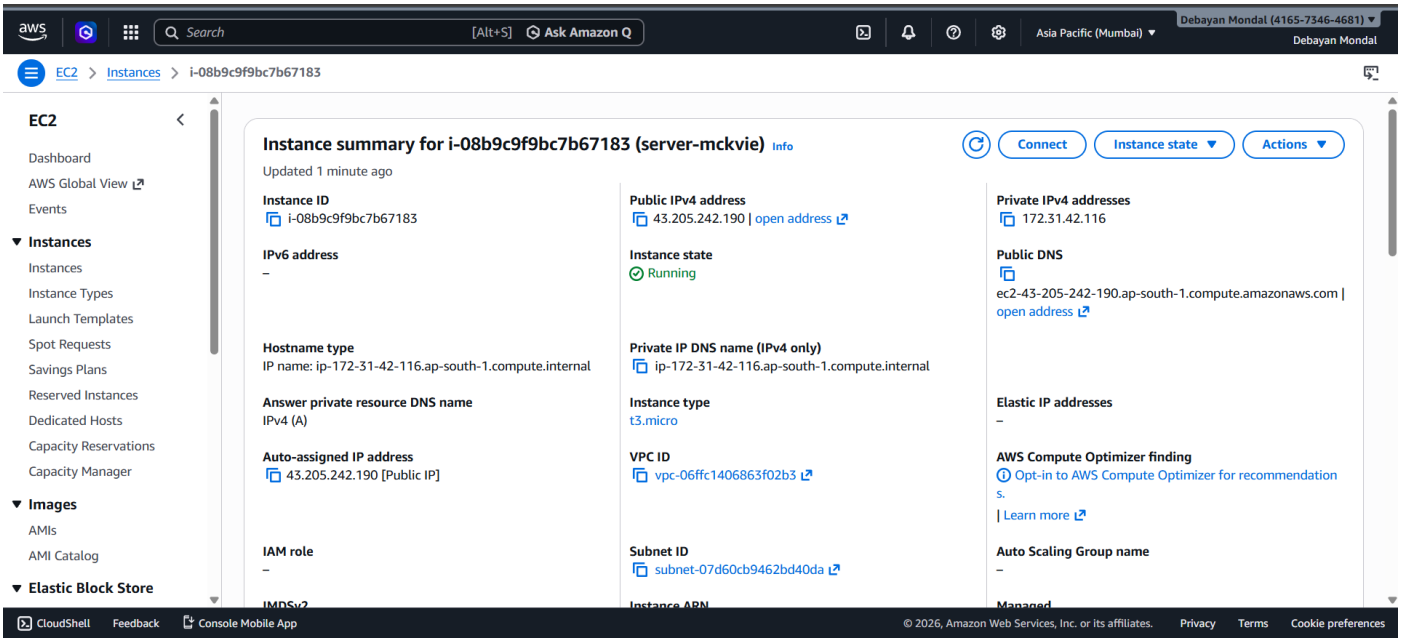
Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Step 7: The Instance is successfully created. Click on the instance link.



Step 8: Now in the instance summary we will see the public IPv4 address and private IPv4 address.

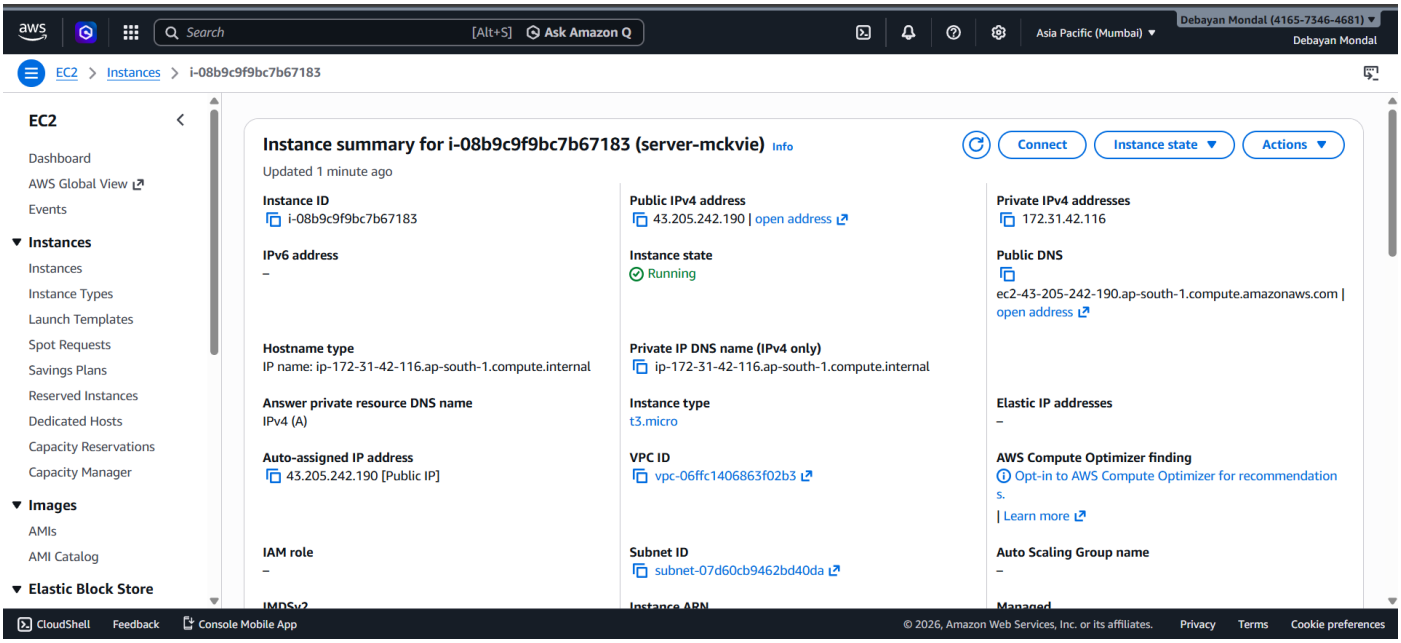
Before Restart:



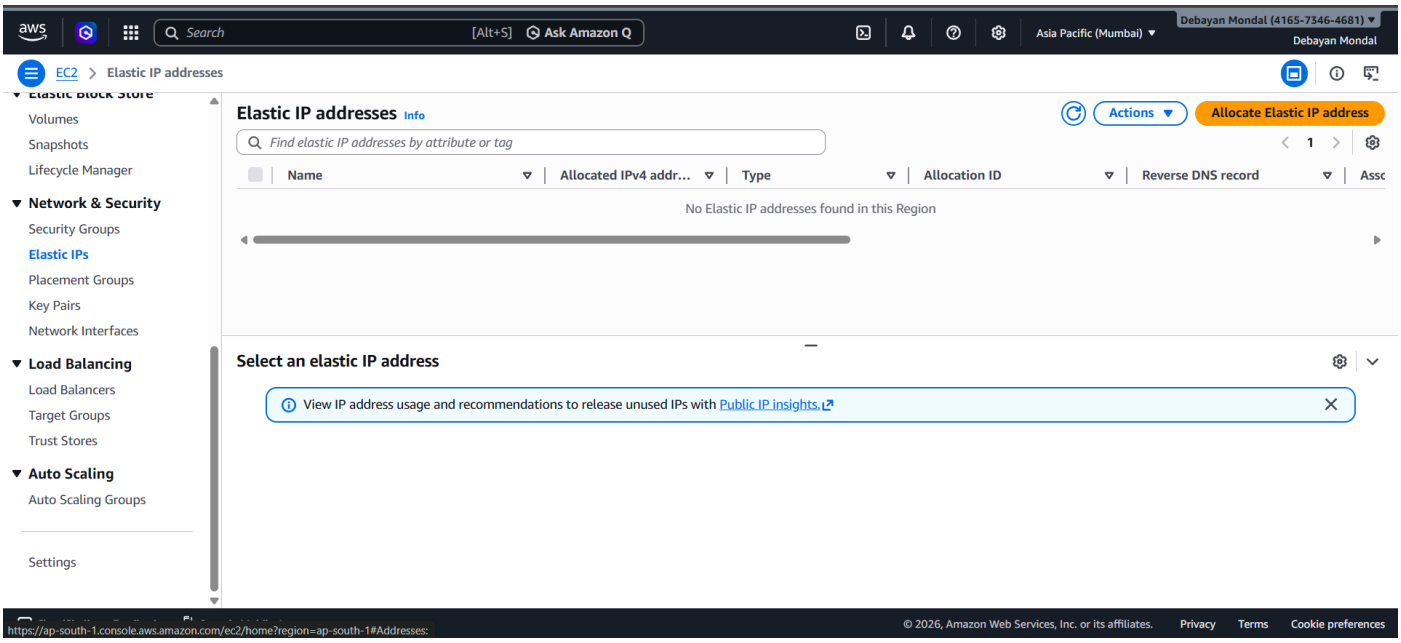
Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Step 9: Now we will shutdown our instance and restart it. On starting we will notice that the public IPv4 address of our instance will be changed meanwhile our private IPv4 address remains the same.

After Restart:

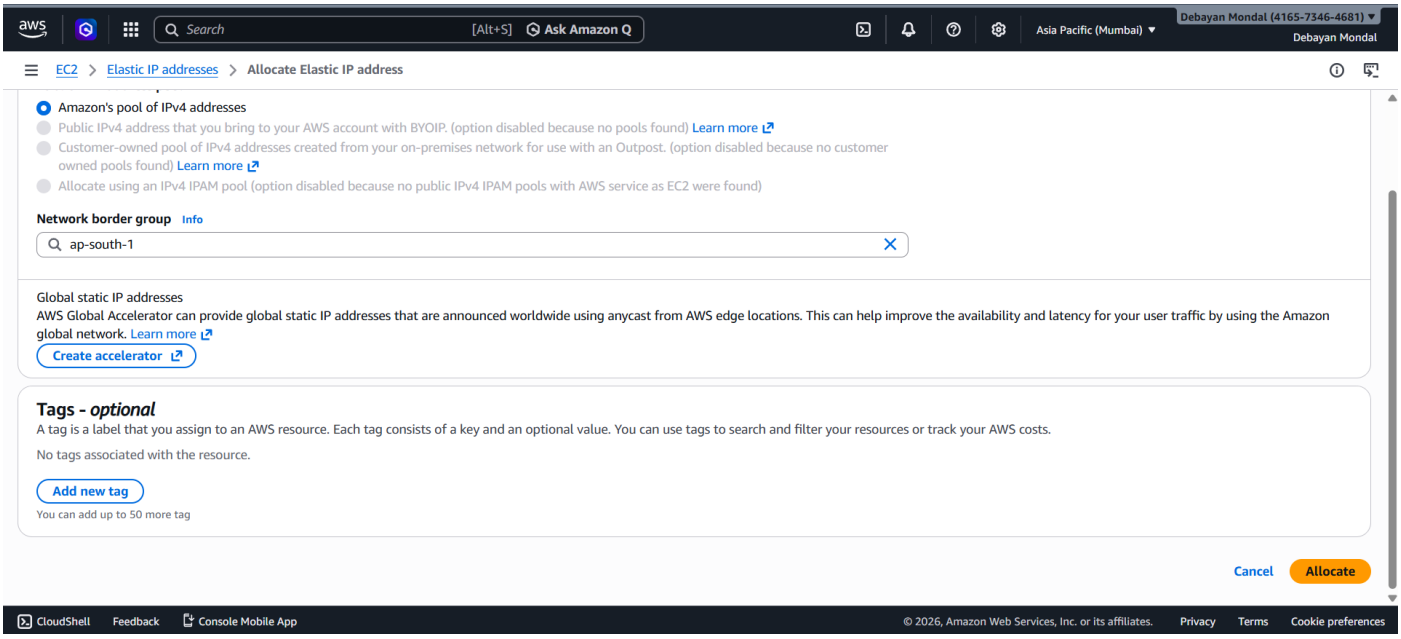


Step 10: On the side bar we will click on **Elastic IPs** and then click on the **Allocate Elastic IP address** button.

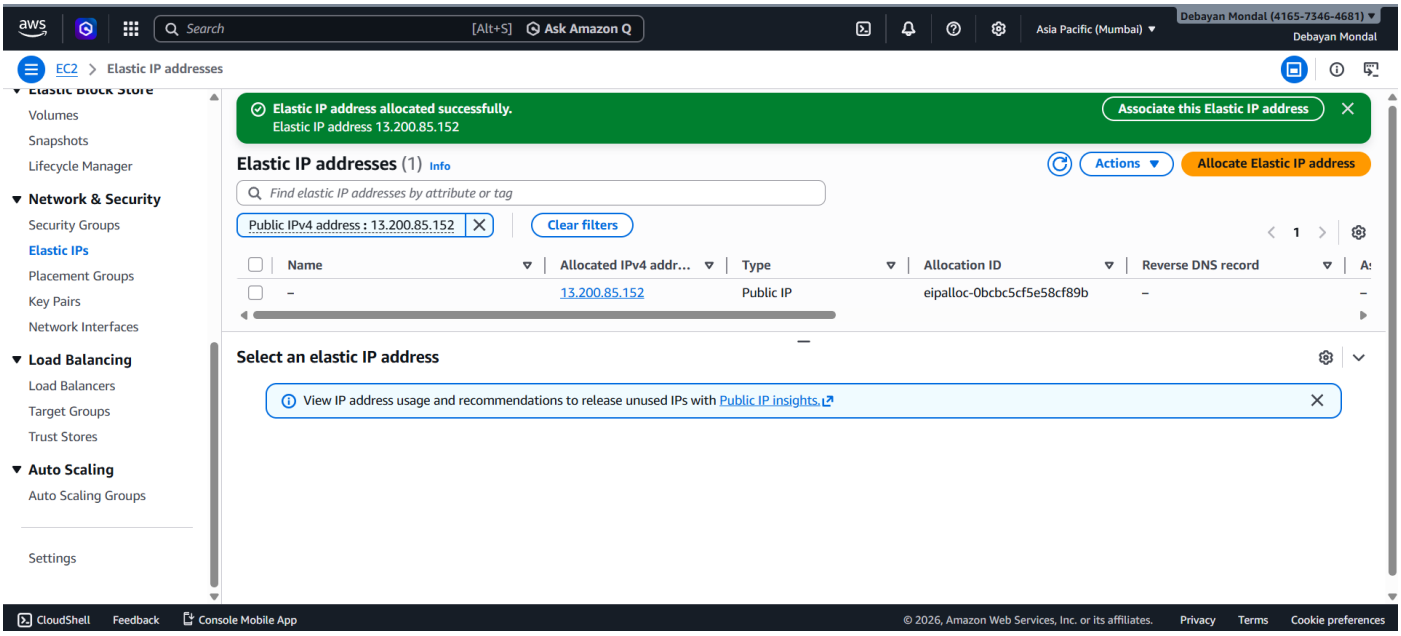


Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Step 11: On this page we will check the **Network border group** and then click on **Allocate** button.

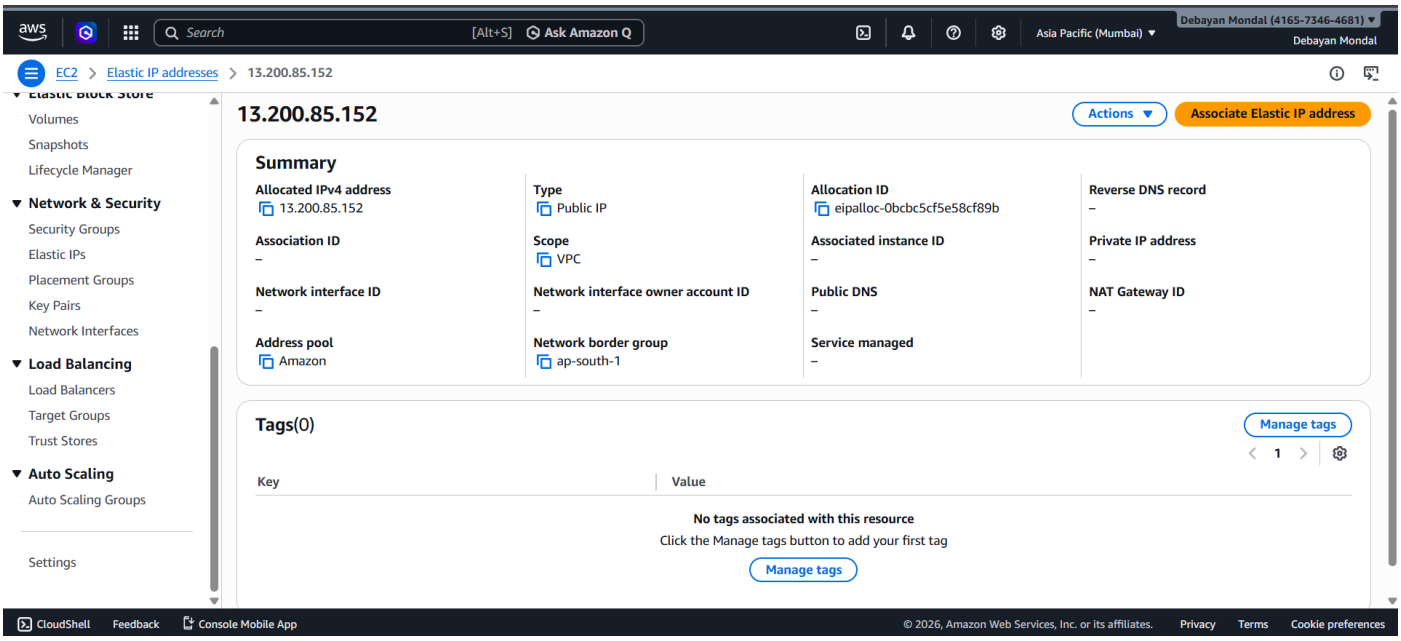


Step 12: An Elastic IP will be created. We will click on that IP.

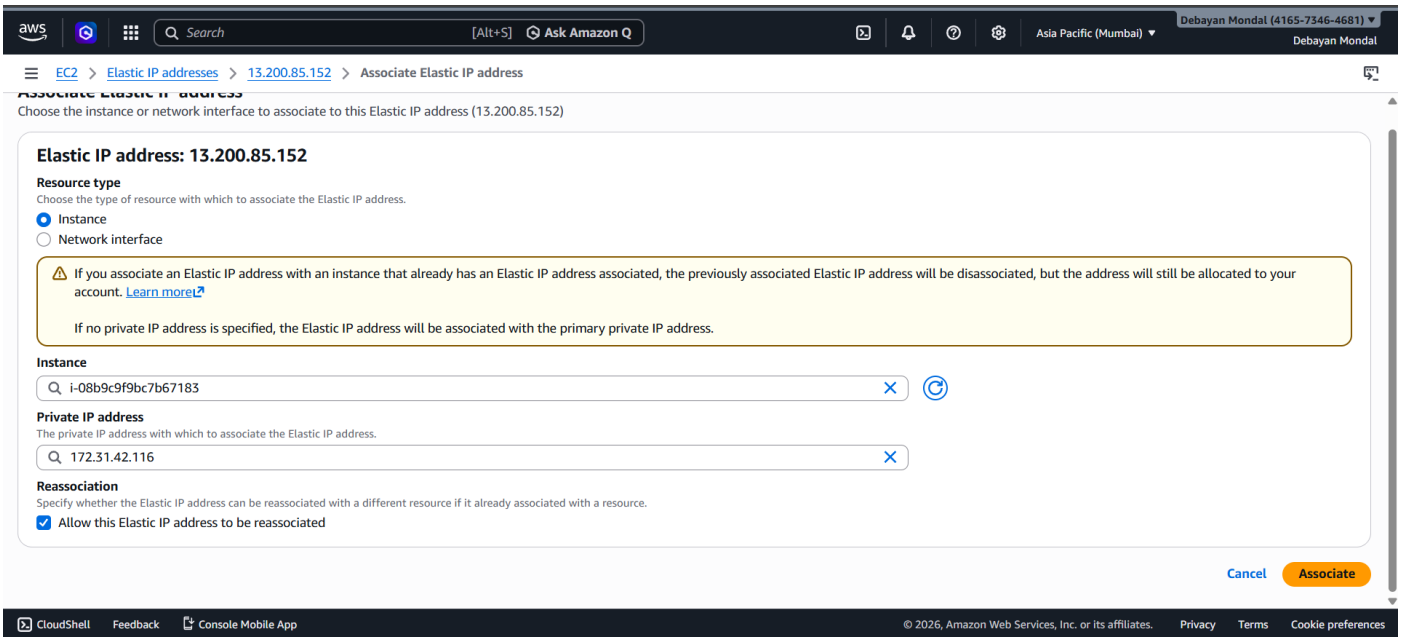


Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Step 13: In the Summary page, we click on the **Associate Elastic IP address** button.

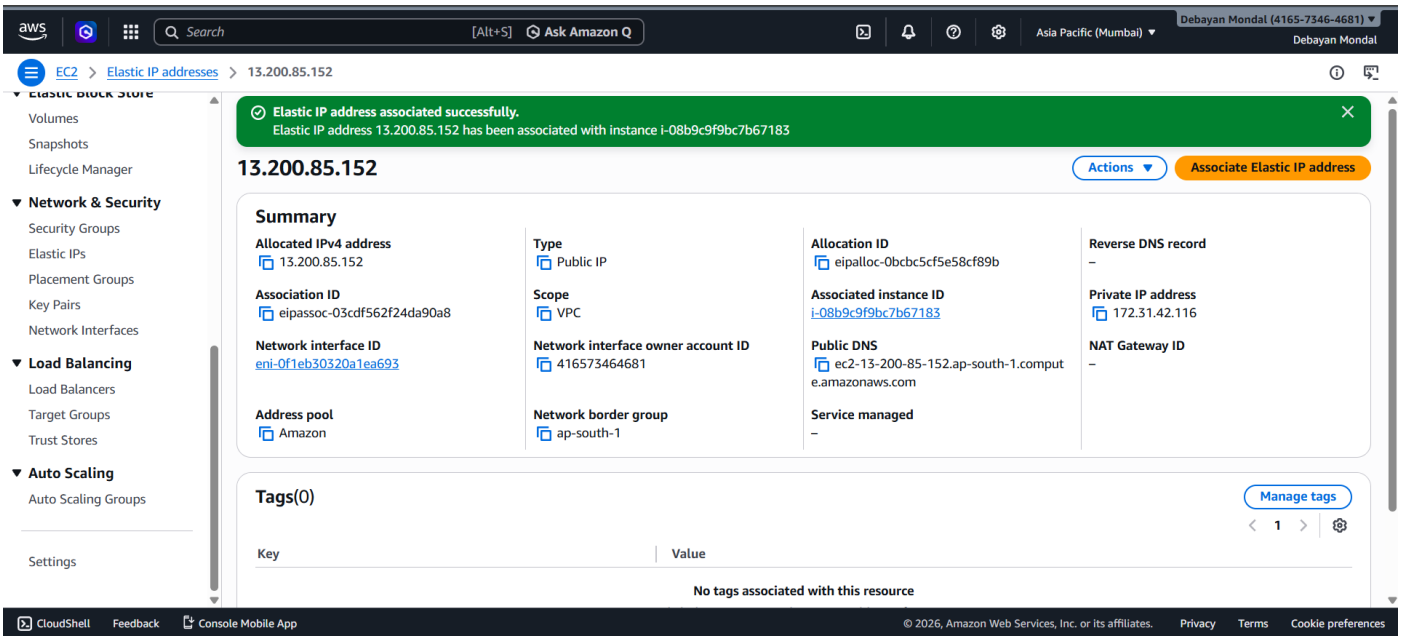


Step 14: In this page, we will select the **Instance** and the **Private IP address** and check the **Allow this Elastic IP address to be reassociated** checkbox and click on the **Associate** button.



Name: Debayan Mondal **Roll. No:** 135 **ExamRoll:** 11600223142

Step 15: Elastic IP address will be associated successfully.



Step 16: Now returning to the Instance summary we will notice it will get associated with and Elastic IP address and on restarting the Instance we will notice that this time, the public IPv4 address remains same.

Before Restart:
